## Environmental Policy

We are acutely aware of the impact any industrial process can have on the environment and are therefore proactive in all matters that may affect the environment wherever possible.

CPC Battery Services Ltd maintains the highest possible standards of environmental awareness and compliance throughout, which includes recycling materials used within the company wherever possible.

We are committed not only to maintaining the accepted environmental standards, but to be fully involved in the waste management of our industry and to remain fully compliant with existing legislation.

To this end we provide a waste collection service to all our customers, along with documentation that enables our customers to fulfil their duty of care and legal obligations under the environmental legislation.

Along these lines we also listen to our customers' requirements and provide information and guidance to them to give them the best practical environmental options.

We ensure that all employees are kept abreast of any new developments and changes in legislation and work within the company's operating practices maintaining records.

We evaluate all material in accordance with our procedures and continue to develop recycling and recovery alternatives.

We continually review all possible options to improve the efficiency of our working practices so as to reduce the use of energy.

This policy will be reviewed to ensure our environmental objectives are continued to be met.
